CRUISING MAP

~Tokyo's attraction spots seen from the boat~

① Tokyo Tower

Symbol of the old Tokyo, Tokyo Tower is standing at 333 meters high in the center of the Japanese capital. The construction finished on December 23rd 1958. Depending on the seasons, Tokyo Tower changes its light colors.

② Harumi Wharf

This pier overlooks Tokyo Bay and offers to the customer a picturesque view of the bay. Opened 24 hours a day, luxury ships can be seen up close.

③ Rainbow Bridge

One of the most well-known sightseeing spot of Tokyo, Rainbow Bridge is also a symbol of Tokyo Bay. It is about the same height as a 40-story skyscraper!

④ Odaiba

Artificial island located in Tokyo Bay, Odaiba is connected to Tokyo by the famous suspension bridge called Rainbow Bridge. Classic cruise spot of Tokyo.

⑤ Toyosu

Former shipyard of Tokyo, Toyosu area became with time, one of the largest shopping mall in central Tokyo. The notorious fish market: Tsukiji, has been relocated there from October 2018.

⑥ Eitai Bridge

Bridge built in 1698 to celebrate the 5th shogun Tsunayoshi 50th birthday. It's the 4th bridge spanning the Sumida river, Eitai Bridge is a notorious spot during cruising tour.

⑦ Hama Rikyu Gardens

Beautiful garden dating back to the Edo period (1603–1867), it was first built to server as the feudal lord's residence. Good place to rest and enjoy the contrast between traditional and modern sceneries.

⑧ Oi Container Terminal

Large deep-water wharf of 2,354meter long, Oi container is one of the world's leading terminals and Tokyo's core container terminal.

⑨ Gate Bridge

Tokyo Gate bridge is a 2.6km long truss bridge and opened to the public in February 2012. It was designed to withstand earthquake. It's also called Dinosaur Bridge due to his shape.

⑩ Haneda Airport

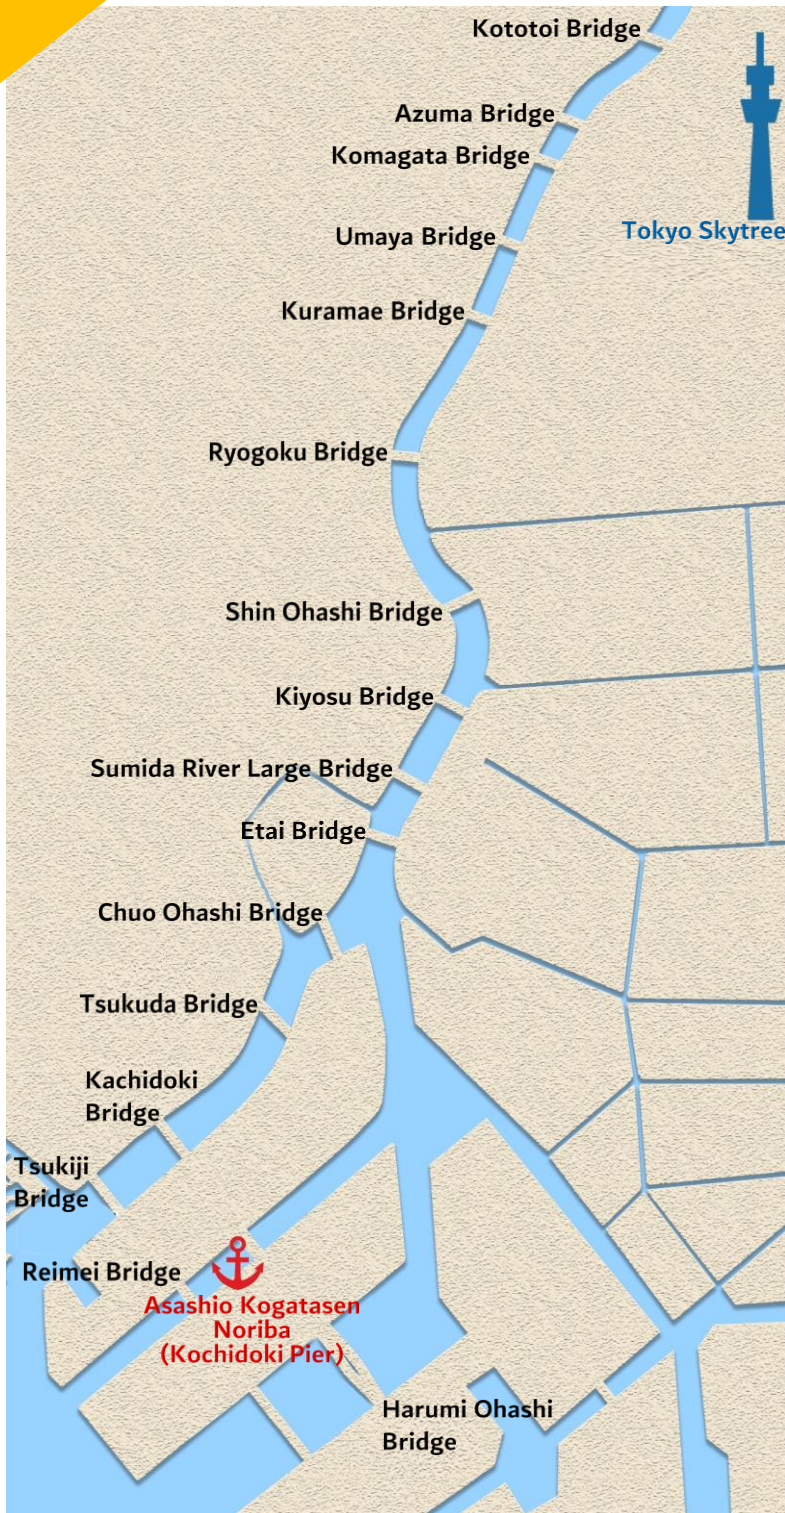

One of the largest airport in Japan, you can observe few airplanes landing at Haneda airport from our boats! You should definitely try this experience!

CRUISING MAP

~ Cruising Up North of Sumida River ~

Azuma Bridge

One of Asakusa's most historical icons, Azuma Bridge was first built in 1774 but get destroyed several times in the past. The latest version is dating back from in 1931.

Komagata Bridge

The Bridge was built in 1927 after the Great Kanto Earthquake. In the middle of the bridge, there is an alcove with a clear view of the Tokyo Skytree.

Umayu Bridge

Umayu Bridge is the only triple-arch bridge on Sumida River. It was called Umayu (horse stable) because during the Edo period, the area had a stable for horses that transported rice to the government.

Kuramae Bridge

This bridge was also built in 1927 following the Great Kanto Earthquake. Painted in bright yellow, the bridge reminds us of rice grains.

Ryogoku Bridge

The bridge was built in 1659 and rebuilt later in 1932 and 2008. Its name, meaning "two provinces", came from its joining Musashi (Old name of Tokyo area) and Shimosa Provinces.

Shin Ohashi Bridge

Built in 1693, Shin Ohashi Bridge was one of the bridges that was spared by the Great Kanto Earthquake and allowed people to escape.

Kiyosu Bridge

The Kiyosu Bridge was part of the restoration project after the Great Kanto Earthquake. Its design is inspired of the suspension bridge over the Rhine located in Cologne, Germany.

Sumida River Large Bridge

Double-decked bridge completed in 1970. It is carrying an expressway and general road over the river. Beautiful night view can be observed from the road.

Etai Bridge

Bridge built in 1698 to celebrate the 50th anniversary of 5th shogun Tsunayoshi. It's the 4th bridge spanning the Sumida river, Etai Bridge is a notorious spot during cruising tour.

Chuo Ohashi Bridge

Stylish bridge designed by a French design company, Chuo Ohashi Bridge is a symbol of Chuo ward. The bridge was completed on the 26th August 1993, same day than the well-known Rainbow Bridge in Odaiba.

Tsukuda Ohashi Bridge

Built in 1964, it was the first bridge built over the Sumida River after the World War II. Tsukuda Bridge offers a spectacular panoramic view of skyscrapers in Tokyo.

Kachidoki Bridge

Only drawbridge built on Sumida river in 1940. During the 1970's, the bridge started to be operated by electricity and it takes approx. 70 seconds to open or close.
